Embedded lithium-ion battery
Adjustable operator position
Excellent visibility
Maximum throughput
High residual capacity

### **ETV 216i**

### Electric reach truck (1,600 kg)

The ETV 216i reach truck is the ideal partner for the effective and safe stacking, retrieval and provision of pallets for order picking. Its rapid and boost charge features facilitate flexible usage even in multi-shift operation with lift heights of up to 10,700 mm.

The integrated li-ion battery, which has been completely redesigned along with the truck, is extremely compact. This provides completely new free space for the user. For example, the unrestricted footwell and the armrest, which is adjustable in two directions, help to ensure fatigue-free work for operators of all sizes.

The compact battery means that visibility in the fork direction is not limited. The load and the support arms are always clearly visible.

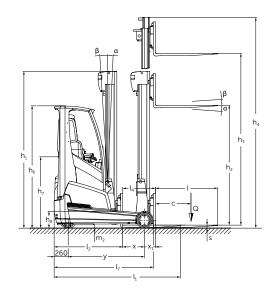

In addition, the high dielectric strength of the battery allows for improved performance of the hydraulic pump, even when the battery level is low. Maintenance-free operation and long service life reduce costs.

Fast lifting and reaching means that significantly more pallets per hour can be processed in comparison with conventional trucks.

The workstation also has numerous advantages: The operator position not only has optimum all-round visibility, but also easy to access controls and accessory parts. The ETV 216i also has storage options for papers, work materials and drinks bottles.

## Benefit from the advantages

Non-slip footstep

Spacious footwell

Comfort charging

- Removal of the lead-acid battery gives better view of the support arms and
- Slim roof struts enable all-round visibility.
- Drive wheel cover.
- 2 handles for safe entry and exit.
- · Shoulder protection.
- Panorama glass roof (optional).
- · Integrated dayLED (optional).

#### **High-performance mast**

Jungheinrich masts help to ensure maximum safety and utilisation of warehouse capacity:

- Fast lifting, lowering and reaching.
- · High residual capacities with lower dimensions.
- · Existing mast tilt and fork tilt.

#### **Ergonomic workstation**

The operator position provides ideal working conditions for maximum performance and reduced strain on the operator:

- · Armrest and steering wheel can be adjusted separately with minimum effort.
- · Clearly visible wide entry step.

- · Holder attachments for additional equipment such as radio data terminals or scanners.
- Wide seat gives the operator more space.
- Practical storage trays.
- · Comfort charging.

#### Assistance systems and options

For more power and full load stability: · Positioning laser for easier stacking of

- the load.
- operationCONTROL.
- Fork camera with monitor.

#### soloPILOT control lever

The control lever for activating all hydraulic functions, also selects the direction of travel and activates the horn.

- · All the controls are within the operator's field of vision and are clearly designated for each specific function.
- Maximum handling capacity through the simultaneous use of 2 hydraulic functions (e.g. lifting and reaching).
- Convenient control of additional attachments, e.g. a fork positioner (optional).

- · Accurate operations can be achieved through the precise functions.
- Comfortable posture with padded
- multiPILOT (optional).

### Easy-to-read colour display

- · Displays direction of travel and wheel
- · Battery status with residual time dis-
- 3 adjustable travel programs for individual adjustment to any requirements.
- Operating hours and time of day.
- Lift height (optional).
- · Load weight (optional).

### Lithium-ion technology

- · High degree of availability thanks to extremely short charging times.
- · No battery exchange required.
- Cost savings due to longer service life and low maintenance compared with lead-acid batteries.
- No charging rooms and ventilation required as there is no build up of gas.
- Longer service life with 5-year Jungheinrich guarantee.
